The screenshot displays the Chrome DevTools interface, specifically the Network tab. At the top, the address bar shows the URL "http://localhost:3000/orders". The toolbar includes various icons for network actions, along with filters like "Preserve log", "Disable cache", and "No throttling". Below the toolbar, there are tabs for different types of requests: All, Doc, JS, Fetch/XHR, CSS, Font, Img, Media, Manifest, WS, Wasm, and Other. The "Fetch/XHR" tab is selected, showing a list of requests. Two requests are visible: one labeled "orders" with a status of 200 OK, and another labeled "orders" with a status of 404 Not Found. The first request is expanded, showing its details in the right-hand pane. The "Response" sub-tab is active, displaying a JSON object representing an order. The JSON structure includes fields for "orderId", "amount", "dateCreated", "confirmationNumber", "customerId", "customer" (with nested fields like "customerId", "customerName", "address", "phone", "email", "ccNumber", "ccExpDate"), "lineItems" (an array of objects with "bookId", "orderId", and "quantity"), and "books" (an array of objects with "bookId", "title", "author", "price", "isPublic", and "categoryId"). The bottom status bar indicates "2 requests | 1.2 kB tra" and the current cursor position is "Line 1, Column 373".
